

June 6, 2009

Once again, BMB demonstrates high commitment and expertise.

BMB is glad to share with its clients the outstanding achievement of Cisco Authorized Technology Provider - Video Surveillance, in the Menal, and the first in the Levant.

BMB SAL has met all ATP program requirements and criteria to earn this designation. We have completed a very focused effort to increase the level of Cisco sales and support capabilities and have met the rigorous Cisco certified personnel levels required for ATP - Video Surveillance Partner. This helps ensure that BMB SAL sales and support organizations are better prepared to properly sell, design, install, and support the ATP program specific technology and products.

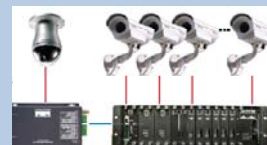

This is an outstanding accomplishment for BMB SAL and demonstrates the desire to develop expertise in the new world of complex networking technologies. This ATP is a highly valued Cisco ATP as it demonstrates BMB's commitment and expertise.

BMB SAL and the Cisco account management team will continue working together to develop and enhance our mutual capabilities to support all our customers.

Other BMB specializations and ATPs achieved earlier:

- ATP: IOS-XR Routing Platforms
- ATP: Outdoor Wireless Mesh (**exclusive in the MENAL region**)
- ATP: MDS Fabric Switching
- Academy Network partner
- Advanced Data Center Networking Infrastructure (**first in the MENAL region**)
- Advanced Unified Communication
- Advanced Routing & Switching
- Advanced Security
- Advanced Wireless LAN

Cisco offers high-quality, low-latency network-centric video surveillance software and hardware that provide a smooth migration from all analog and digital to full network-based deployments, protecting your surveillance investments and enabling new capabilities. Supporting video-monitoring, recording, playback, transmission, and management, Cisco Video Surveillance products deliver required performance and capability to use the power of an IP network to facilitate any-to-any multivendor device interoperability. Migrating to a Cisco solution does not force changes to the surveillance operator workstation. The products can be integrated with other systems, such as point of sale and third party video analytics, and are deployed as part of Cisco's Intelligent Converged Environment vision and architecture for physical security applications.

To know more about this technology, please do not hesitate to call us for an appointment, we will be glad to assist you.
